TO WHOM IT MAY CONCERN

TESTIMONIAL: ELIOR KONSULTANTE (PTY) LTD

I'm the Operational Manager of Fire and Security Techniques and I'm responsible for the Quality Management, Health and Safety as well as all Certifications and Accreditations for the company.

Mr. J de Beer from Elior Konsultante was appointed by TLIU (a Division of the CSIR) as a consultant to Fire and Security Techniques to assist with the implementation and certification process of ISO3834.

We started engagements with Mr. de Beer prior to his appointment as a consultant for TLIU when FST searched for a professional within the Pressure Equipment Industry to assist with certifications. Mr. de Beer came highly recommended from two AIA's.

Mr. de Beer's extensive knowledge of the PER/PED was evident in the way he conducted the entire process. During the entire process he was always very helpful and available to assist with advice.

His conduct was always professional and fair and we gained valuable input from his feedback. His response times on questions was always the same day or latest the next day.

The ISO3834 project commenced in October 2018 and we were informed on 20 February 2019 that we successfully completed our Readiness Survey.

Full certification was obtained in May 2019, this was only achievable with the assistance of Mr. de Beer.

We wouldn't have been successfully in the implementation and accreditation of ISO3834 without his input and support, especially in the short time frame we achieved this certification.

I can personally confirm that Johann is always very professional and extremely helpful. He would be an asset to any company wishing to contract him.
